

RMD Weather Report

30 July 2025

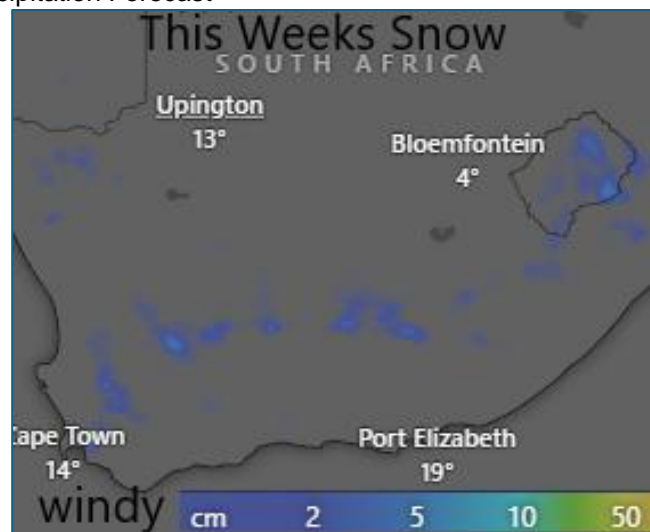

SOUTH AFRICA

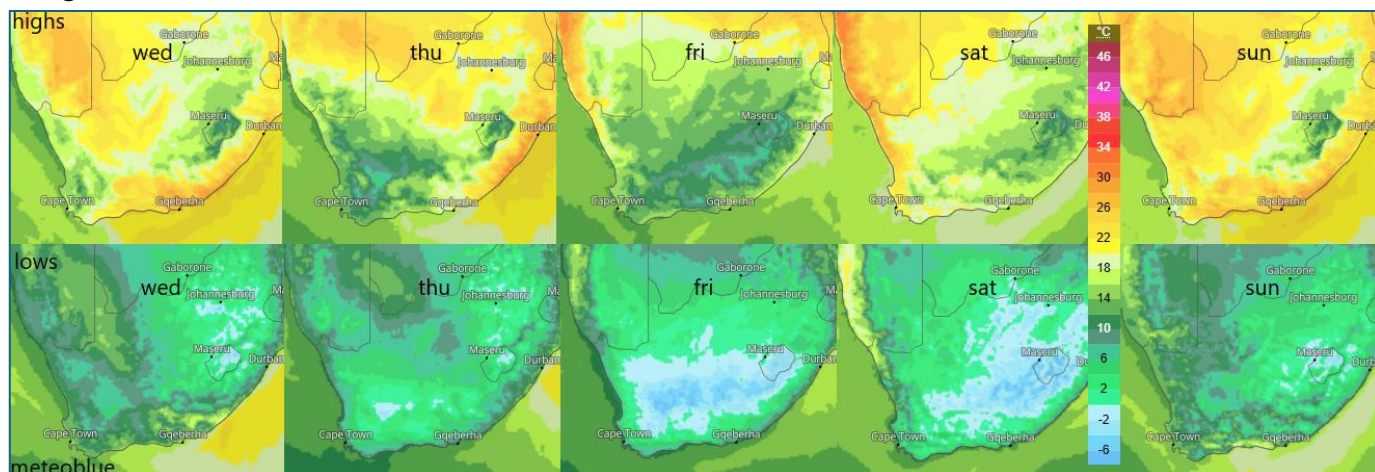

Accumulative 7 Day Precipitation Forecast

COASTAL RAIN AND COLD SNAP FORECAST

Wet conditions are expected along coastal and adjacent regions, while the interior remains mostly dry during the indicated period above. Snow is forecast for parts of the interior over the next few days, image on the right. Cold conditions persist this week, with bitterly cold weather and widespread frost expected over the weekend, image below.

Snow Forecast

5-Day High and Low Temperature Forecast

NORTH AMERICA

DERECHO HITS IOWA, MIDWEST HEATWAVE ENDS

A slow-moving front will bring scattered showers and cooler temperatures to the Midwest over the next few days. Severe storms, possibly a Derecho (mesoscale convective system), struck Iowa and Minnesota Monday, with less damage than expected. More severe weather is possible as the front moves south. Conditions remain mostly favourable for corn and soybeans.

FRONT MOVES THROUGH CENTRAL, SOUTHERN PLAINS

A front will slowly move through the Central and Southern Plains this week, with showers decreasing in the Southern Plains and temperatures dropping significantly. Showers will return to northern areas this weekend and next week, supporting corn and soybean growth.

DAILY SHOWERS IN NORTHERN PLAINS

Scattered showers and thunderstorms hit the Northern Plains over the weekend, with severe storms Monday. A front brings more showers Tuesday and Wednesday, followed by another system late week. Soil moisture supports corn and soybeans but may harm maturing wheat.

ISOLATED SHOWERS, HEAT IN DELTA

The Delta sees isolated showers and hot temperatures this week. A stronger front arrives later, bringing scattered showers and cooler weather by the weekend. Stalled fronts may cause ongoing showers into next week in southern areas.

DROUGHT EXPANDS IN PACIFIC NORTHWEST

Hot temperatures and isolated showers stress spring wheat in the Pacific Northwest, though winter wheat harvest conditions are favourable. Drought expansion is likely to continue.

MIXED RAINFALL IN CANADIAN PRAIRIES

Scattered showers missed drier northern Canadian Prairies, but southern areas benefited from good rainfall. More showers are possible in the southwest Tuesday, with another system expected by the weekend, likely too late for mature or damaged crops.

SOUTH AMERICA

ACTIVE FRONTS IN SOUTHERN BRAZIL

A front brought heavy rain to southern Brazil over the weekend, aiding winter wheat soil moisture. Another front will bring showers this weekend, potentially disrupting the remaining corn harvest.

OTHER

SHOWERY EUROPE

Showers move through Europe this week, except Spain, aiding summer crops but possibly delaying winter wheat harvest. Corn conditions are mostly favourable.

DRYNESS IN EASTERN BLACK SEA

Scattered showers favour western Black Sea areas, while central and eastern regions stay hot and dry, benefiting wheat harvest but stressing corn in Ukraine and southwestern Russia.

BENEFICIAL RAIN IN AUSTRALIA

Showers continue in eastern Australia, with another front bringing rain to western areas this weekend. Recent rainfall has reduced drought and supports winter wheat and canola.

DRY CENTRAL CHINA

Central China, especially the North China Plain, faces heat and dryness this week with sparse showers. Northeast China's corn and soybean areas remain favourable.
