RMD Weather Report 31 October 2025

SOUTH AFRICA

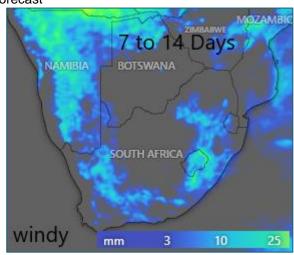

The Next Week's Forecast

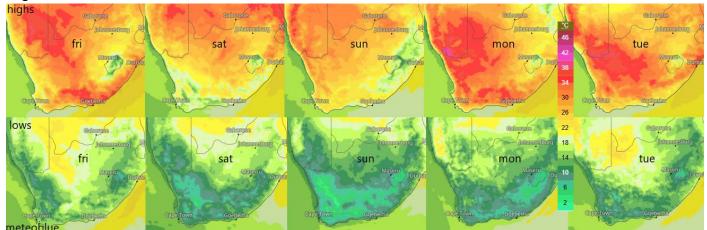

Favourable conditions are in store through the weekend and next week as more rain is forecasted in parts of the southern interior, images above.

The 7 to 14-day forecast on the right, is seeing drier conditions with limited rain forecasted through the summer planting areas at this point.

Temperatures are mixed, mostly hot during the day with some cool patches in the Highlands areas.

Accumulative 7-to-14-day Rain Forecast

5-Day High and Low Temperature Forecast

NORTH AMERICA

Midwest

Heavy showers are exiting the Midwest after recent rains, replaced by scattered showers Thursday and isolated ones Friday-Saturday. Clippers into early November bring light, variable precipitation that may disrupt harvest; temps fluctuate.

Central/Southern Plains

Recent heavy rain eased drought and aided winter wheat but caused some fieldwork delays. Drier conditions trend into November, offering harvest opportunities; frosty mornings persist through weekend.

Northern Plains

Multiple clippers bring light showers through early November, with variable temps trending above normal from the weekend.

Mississippi River

Recent Delta/Ohio Valley rains reduce drought and boost water levels temporarily into early November; drier trends follow.

SOUTH AMERICA

Central Brazil

Front restarts showers after dry week, easing soybean germination concerns; weekend-next week system brings widespread heavy rain to boost soil moisture.

Argentina

Cooler week limited frost damage: ongoing systems deliver scattered showers for high soil moisture in corn planting/early growth, though slowing it with cold. Abundant rain boosts winter wheat but raises disease risks.

OTHER

Europe

Waves of showers maintain high soil moisture for winter wheat; more rain into next week aids establishment but delays fieldwork.

Black Sea Region

Recent rains improved drought and soil for winter wheat; Friday-Saturday showers precede drier, warmer early November, delaying dormancy—active winter needed for good yields.

Australia

Eastern scattered showers this week aided some dry spots spotty; weekend system increases rains favourably for winter wheat/canola filling, improving mixed conditions.
