

RMD Weather Report

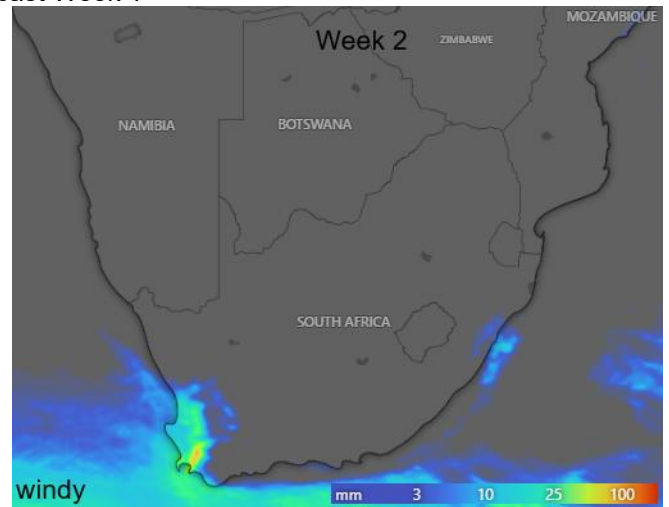

09 July 2026

SOUTH AFRICA

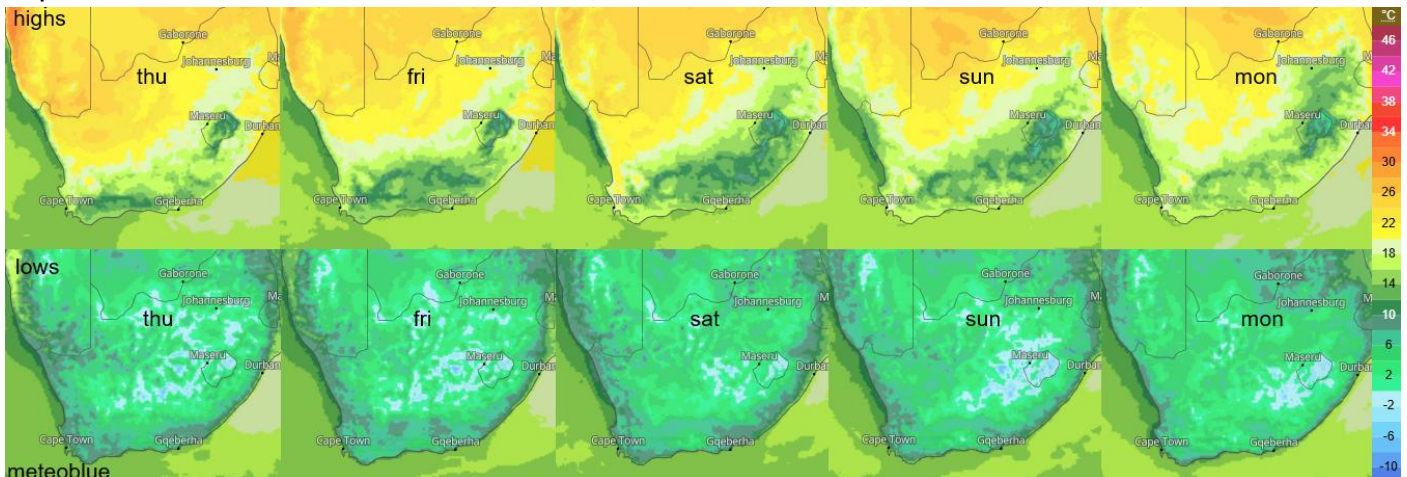

Precipitation Forecast Week 1

High pressure dominates inland, keeping skies mostly clear and dry. Frost remains common overnight, with crisp mornings and mild afternoons. Coastal regions see passing fronts late weekend into early next week, bringing scattered showers and breezy conditions, especially along the south and east coasts. Western Cape stays largely settled, while KwaZulu-Natal and Eastern Cape may catch brief showers.

Precipitation Forecast Week 2

Overall, a stable winter pattern persists, with limited rainfall and no major systems expected.

5-Day High and Low Temperature Forecast

USA

MIDWEST – SHOWERS, HEAT NEXT WEEK? A slow system brings widespread showers and thunderstorms through the weekend. Heat may return to the Upper Midwest early next week, though a front could temper it. Conditions remain favorable for corn and soybeans, but pollination stress risks should be watched.

CENTRAL & SOUTHERN PLAINS – SCATTERED SHOWERS Scattered showers move through midweek, some severe. More widespread activity develops Thursday as a front slips south, continuing into next week across the far south. Temperatures stay seasonably warm, rising this weekend. Rainfall supports crops, though some stress may emerge.

NORTHERN PLAINS – HEAT BUILDING Disturbances bring showers, boosting soil moisture and easing drought unevenly. Temperatures stay mild until surging this weekend. Next week's heat edge may cause stress depending on intensity and rainfall.

CANADIAN PRAIRIES – LIMITED SHOWERS, SOME HEAT Systems bring showers through the weekend, but coverage and intensity are reduced. Temperatures rise into next week, a welcome shift after prolonged cool, wet conditions.

DELTA – CONTINUED SHOWERS A stalled system sustains showers midweek. Another front late week adds more, with activity persisting southward next week. Soil moisture remains high, favouring cotton and soybeans.

WESTERN EUROPE – HEATWAVE CONTINUES Hot, dry conditions persist, stressing corn and summer crops in France. Eastern Europe sees showers and milder air, but heat spreads east this weekend. Even with showers, crop damage is already significant.

Other:

BLACK SEA – FAVORABLE, SHOWERS INCREASING Systems favour Ukraine with heavier rain until Friday, then broaden into Russia next week. Wet, cool weather has slowed growth; warmer, drier conditions would be preferred. Increasing showers may hinder wheat harvest.

AUSTRALIA – FAVORABLE, SLIGHTLY DRIER Winter wheat and canola establishment remains strong. Showers move into the west late week, isolated east. El Niño's drying influence has yet to emerge but may impact reproductive stages later this year.

CHINA – SHOWERS, TYPHOON WATCH Frequent showers aid corn and soybeans. Super Typhoon Bavi may strike Taiwan and central China this weekend, bringing flooding risks. Overall, conditions remain positive despite spring disruptions.
